## E-Commerce website

An e-commerce website is one that allows people to buy and sell physical goods, services, and digital products over the internet rather than at a brick and mortar application. Through an e-commerce website, an application can process orders, accept payments, manage shipping and logistics and provide customer service.

## Task 3::Frontend (Module3)

### Create UI and implement various components using react

- Split design into components and higher order components
- Define structure of the e-commerce components
- Set the basic UI components of the data

### Integrate the APIs to frontend to ensure the dynamic feature of website

- point to base Api to the server
- Design Api calls for elements
- e-commerce website using reactjs
- Handle errors
- Secure content

### Evaluation metrices:

100% completion of the above tasks

## Learning Outcome

- UI Using react components
- using props and different context to pass variables
- Getting familiar with different types of Api
- handling different output idea
- Managing states according to response Api

## E-Commerce Website Hands-on
